Avg Credit Score

20.00K

Avg Loan Amount

Approved Vs Rejected

Overview: Of 4,969 loan applications analyzed, only **23.08% were approved** — reflecting conservative lending standards. The average applicant has a credit score of 575 (Fair range) and requests a ~\$20K loan. The pages that follow break down *what separates approved applicants from rejected ones*.

Borrower Profile: What Drives Approval?

Approval Rate by Employment Type

Approval Rate : Credit Group X Employment Type

Credit Group	Salaried	Self-Employed	Unemployed
Fair	54.47%	56.38%	2.93%
Good or Better	72.05%	70.43%	3.51%
Poor	2.53%	2.34%	3.02%

The Two-Gate System: Loan approval depends on passing **two gates**. First, employment — unemployed applicants face just ~3% approval regardless of credit score. Second, credit — among employed applicants, "Good" credit reaches ~72% approval while "Poor" credit collapses to ~3%. A borrower must clear **both gates** to be approved. Loan amount (~\$20K) is consistent across all profiles and does not influence the decision.

Interest Rate Impact on Loan Approvals

Approval Rate vs BoC Interest Rate (2018-2026)

● Approved Rate PCT ● Average Rate

Key Insight: Borrower fundamentals beat macro conditions. Despite the Bank of Canada rate moving from 0.3% (COVID) to 4.7% (2023 hikes), approval rates stayed within a narrow 21–25% band. The macroeconomic rate environment is not a meaningful predictor of individual loan approval — credit score and employment status are.
